PARTS DIAGRAM

BATTLE CAT, PART BY PART.

Every fitting on the twin-pontoon Battle Cat, numbered from bow to stern.

BOW

STERN

1. V-TEAK grip drop-stitch floor
2. Rubber protector guard
3. Bow D-ring
4. Nose guard
5. Bottom tube guard
6. Tube inflation valve, 3.5 PSI
7. Tube side guard
8. Nylon grab handle
9. Cleat handle
10. EVA-padded bench
11. Bench mount
12. Bimini bracket
13. Rowing bracket
14. Paddle clamp
15. Stern D-ring
16. Aluminum paddle
17. Splash guard
18. Woven PVC tube
19. Tail tube guard
20. 15 in transom
21. Scupper drain plug
22. Stainless davit point
23. Engine mounting plate
24. Floor inflation valve, 10 PSI

Most fittings are mirrored on both sides; each is marked once. Shown on the 10 ft model.

WHAT THE PARTS DO

TWO CHAMBERS, TWO PRESSURES

CHAMBER	PRESSURE	WHAT IT DOES
Tubes	3.5 PSI	Buoyancy and structure, in independent air chambers
V-TEAK floor	10 PSI	A rigid, stable deck underfoot

All valves are H3 Halkey-Roberts-style. A locking pin lets air in without escaping when the pump comes off; press and lock the pin open to deflate.

ON DECK

Two kinds of handle

Nylon grab handles inside the boat carry Rover's color-block stripes, so a handhold is easy to find underway. **Cleat handles** on the outside are oversized for lifting and carrying, and double as tie-off points.

EVA-padded benches

Removable, with a hook-mount design. Take them out when you want an open deck. A magnetic plate under each bench holds a Turtlebox Ranger speaker.

RIGGING AND STERN

Rowlock paddle system

Both aluminum paddles lock along the tubes, so they do not rattle or shift. Release them from the paddle clamps and rowing brackets when you need to row.

Rigged and ready

A through-hull davit system at the transom for hoisting and towing, bow and stern D-rings for securing and lifting, and towing rings beneath the bow.

Transom

15 in, short shaft. Marine-sealed and wrapped in a protective vinyl layer, with reinforced brackets to the tubes. It also takes accessories such as a transducer or fish finder.

Only on the Battle Cat: nose guards, tail tube guards and bottom tube guards. Reinforced rubber protects the pontoons where they meet sand, rock and docks, and the bow is open between the pontoons for boarding.
